POLYUREA

<b>Client</b>	FAAY Prefab B.V., Vianen
<b>Coating Contractor</b>	PU Nederland, Werkendam
<b>Project</b>	Prefab Refurb Bathrooms, Vianen
<b>Surface</b>	approx. 5 m <sup>2</sup>
<b>Construction</b>	January 2012
<b>VIP System</b>	QuickFill Slow SL QuickSpray Industrial QuickCoat-Base Protect

### Project Description

PU Nederland got the order as new preferred applicator for VIP to find a practical solution for the manufacture of prefab flooring for prefab bathrooms. To save time and money the customer choose QuickSpray Industrial (aromatic), a 100% pure Polyurea 2-K Coating based on Prepolymer and Polyamine technology with a matching colour stable polyaspartic QuickCoat-Base Protect.

Work was carried out in 4 easy steps:

1. For each floor FAAY made a mould.
2. Using the hot spray technique the aromatic Polyurea QuickSpray was sprayed into the mould.
3. Immediately afterwards the QuickCoat-Base Protect (aliphatic) was applied with an airless system, to achieve a nice colour stable floor.
4. The completed floor is than shipped to wherever it is needed and bonded onto the old flooring on site using QuickFill Slow SL.

These working Steps could be completed successfully very fast and as such many floor elements can be manufactured in a single day.

The combination of QuickSpray Industrial (aromatic) and QuickCoat-Base Protect (aliphatic) makes it possible to realise a large variety of different floors, and there are hardly any limits to the creativity of the FAAY design team.
