

## Wembley Arena, UK

POLYUREA

<b>Client</b>	Univar for Nolan Services, UK
<b>Coating Contractor</b>	Renocon Ltd.
<b>Project</b>	Wear and Tear protection on walls close to the service elevators
<b>Area</b>	Wall areas in an elevator room
<b>Construction</b>	July 2010
<b>VIP System</b>	QuickSpray Xpress

### Project Description

The Walls on all 5 floors of Wembley Arena are supposed to be protected against damage through service trollies and the usual traffic of thousands of visitors on Match Days. The first sample area for trail purposes was done in an elevator room on July 1st 2010. Nolan Services chose the fast version of the grey QuickSpray Xpress (aromatic) from the 600ml cartridge utilising the applicator gun with spray adapter. The coated area is now much easier to clean and far more resilient due to the high chemical and abrasion resistance of the aromatic Polyurea QuickSpray and the service trollies no longer cause serious damage to the walls. The work could be carried out without influencing the surrounding areas within just a couple of hours through the handy cartridge system, only requiring a small compressor.

Nolan Services is currently planning to use the Polyurea System in many other areas of the arena, and most areas will be completed using the QuickSpray in the hot spray version using a Graco Reactor EXP-2. Our preferred applicator for the South East, Renocon Ltd. will use a variety of colours to match the existing colourings of each level.
