Customer	VW Dealer Pleitner, Versmold
Planning	
Applicator	Rüdiger Schmidt, Versmold
Project	Roofcoating & Sealing
Surface	650 m²
Completion	September 2012
VIP System	QuickSpray Industrial beige

Project Description

The Volkswagen Dealership Pleitner had various pressing problems with leakages on their roof and was searching for a suitable system, that could be used for all the various types of roofing systems on their roof. Their local VIP approved applicator Rüdiger Schmidt advised QuickSpray Industrial, a 100% pure 2K Polyurea Hotspray System. The old roofing parts were cleaned and wet areas were dried. Afterwards polystyrene foam was bonded to the old flat roofing utilising VIP's 1K MS Polymer adhesive. Finally the QuickSpray Industrial in colour sandbeige RAL1003 was applied using a Graco Reaktor HX-P2 hotspray machine. This way a watertight membrane was created for the whole roof, that finally allows a leak free long term life for the roof. And thanks to the underlying styrofoam insulation the new roof also provides energetic savings. The customer is very happy with the result and does recommend it due to the fast completion in just a matter of 2-3 days.
