

Sum Wing for a Deep Sea Trawler, Nederland

POLYUREA

Client	Arie van Wijk, Goedereede
Coating Contractor	PU Nederland, Werkendam
Project	Sum Wing Ouddorp
Surface	approx. 30 m ² Sum Wing
Construction	February 2012
VIP System	QuickPrime 1K-PU QuickSpray Industrial LSE

Project Description

PU Nederland got the order as new preferred applicator for VIP to coat a SumWing for a deep sea trawler. To save time and money the customer choose QuickSpray Industrial LSE, a 100% pure Polyurea 2-K Coating based on Prepolymer and Polyamine technology with very good non stick properties and a low surface energy.

Work was carried out in 3 easy steps:

1. The Sum Wing was sandblasted to SA 2 ½ grade and properly cleaned.
2. With QuickPrime 1K Polyurethane primer the adhesion properties on the steel were increased.
3. Using a Graco Reactor HX-P2 Hotspray machine, the QuickSpray Industrial LSE was applied.

These Steps could be rapidly completed with a very good result.

Through using the QuickSpray Industrial LSE the customer managed to protect the Sum Wing long term against abrasion through water, sand, rubbish and everything else that can be found on the seabed.
